## Mechanical Engineering Department

Semester/Year		III/II		Program			B.Tech.					
Subject Category	<b>DC</b>		Subject Code:	<b>ME-301</b>		Subject Name:	<b>Fundamentals of Thermodynamics</b>					
Maximum Marks Allotted							Contact Hours			Total Credits		
Theory				Practical		Total Marks						
End Sem	Mid-Sem	Assignment	Quiz	End Sem	Lab-Work		L	T	P			
60	20	10	10	-	-	100	3	1	0	4		
Prerequisites:(Only for open electives)												
Course Objective:												
<p>. The objective of this subject is to provide understanding of basics of thermal engineering and the relationships of the properties of substances for their use in determining the changes of properties in physical processes performed by the substances.</p>												
Course Outcomes:												
<p>After completion of the course, students would be able to -</p> <ol style="list-style-type: none"> <li>1. Understand the basic concept and fundamental laws of thermodynamics</li> <li>2. Apply knowledge to identify applications on Heat Engines, Refrigerator and Heat Pump based on Carnot Cycle</li> <li>3. Analyse the behaviour of an ideal gas and real gas</li> <li>4. Evaluate the phase transformation and properties of pure substances.</li> <li>5. Analyse the thermodynamics relations</li> </ol>

CO4	3	3	3	3		1						
CO5	3	2				1	2					1
Contents:												
UNITs	Descriptions										Hrs.	CO's
I	Basic Concepts: Thermodynamic, Property, Equilibrium, State, Process, Cycle, Zeroth Law of thermodynamics, statement and significance, Heat and work transfer, First law of thermodynamics: statement of first law of thermodynamics, first law applied to closed system, first law applied to a closed system undergoing a cycle, processes analysis of closed system, flow process, flow energy, steady flow process, relations for flow processes, and limitations of first law of thermodynamics.										8	1
II	Second law of thermodynamics: Heat engine, heat reservoir, refrigerator, heat pump, COP, EPR, Available energy, Carnot's theorem, Carnot's cycle, efficiency of Carnot's cycle, statement of second law reversible and irreversible processes, consequence of second law, Entropy: Entropy change for ideal gas, T-S diagrams, Availability and Irreversibility.										8	2
III	Concept of an ideal gas: Gas laws, Avogadro's hypothesis, Real Gas, Deviation with ideal gas, Vander-wall's equation, evaluation of its constants, limitations of the equation. The law of corresponding states compressibility factor, generalized compressibility chart, P-V-T surface of a real gas, Non-reactive gas mixture, PVT relationship, mixture of ideal gases, properties of mixture of ideal gases, internal energy, enthalpy and specific heat of gas mixtures, enthalpy of gas mixtures.										8	3
IV	Pure substances: Phase, Phase- transformations, formation of steam, properties of steam, PVT surface, HS,TS,PV,PH,TV diagram, processes of vapor measurement of dryness fraction, use of steam table and mollier chart.										8	4
V	Thermodynamics Relations: Gibb's function, Helmholtz function, Maxwell relations, and their applications. TdS equations. Relationship between specific heats, Clapeyron equations, Joule-Thomson coefficient, Coefficient of volume expansion, adiabatic and isothermal compressibility.										8	5
Guest Lectures (if any)												
Total Hours											40	
Suggestive list of experiments:												

Text Books-	
<ol style="list-style-type: none"> <li>1. R. K. Rajput, Engineering Thermodynamics, LP</li> <li>2. Sonntag, Fundamentals of Thermodynamics, Wiley</li> <li>3. Moran, Shapiro, Principles of Engineering Thermodynamics, Wiley</li> </ol>	
Reference Books-	
<ol style="list-style-type: none"> <li>1. P. K. Nag; Engineering Thermodynamics, McGraw Hills</li> <li>2. Cengel Y; Thermodynamics: An Engineering Approach; McGraw Hills</li> <li>3. Arora CP Thermodynamics, McGraw Hills</li> </ol>	
Modes of Evaluation and Rubric	
<p>There will be continuous evaluation for during the semester for 40 sessional marks and 60 semester End term Marks. Subjects where laboratory work is prescribed, the practical marks are 50, out of which 30 marks will be awarded for viva voce and 20 marks for lab work. Out of 40 sessional marks, 20 shall be awarded for Mid semester, 20 marks to be awarded for day to day performance and Quiz/Assignments. For the 60 Marks, there will be a semester – End examination as per the norms of AICTE.</p>

**Contents:**

UNITs	Descriptions	Hrs.	CO's
I	<p><b>Stress and Strain:</b> Elementary definition of stress and strain, stress- strain relationship, elastic, plastic and visco-elastic behavior of common materials in tension and compression test, stress-strain curves, Hooke's law, Poisson's ratio, elastic constants and their relations for an isotropic hookean material, anisotropic and orthotropic materials.</p> <p>Tension, compression, shearing stress and strain, thermal stresses, composite bars, equations of static equilibrium, concept of free body diagram, Strain energy due to axial loading.</p>	8	CO1
II	<p><b>Members Subjected to Flexural Loads:</b> Theory of simple bending, bending moment and shear force diagrams for different types of static loading and support conditions on beams, Bending stresses, section modulus and transverse shear stress distribution in circular, hollow circular, I, Box, T, angle sections etc. Strain energy due to bending.</p>	8	CO2
III	<p><b>Principal Planes, Stresses and Strains:</b> Members subjected to combined axial, bending and torsional loads, maximum normal and shear stresses, concept of equivalent bending and equivalent twisting moments, Mohr's circle of stress and strain.</p> <p><b>Theories of Elastic Failures:</b> The necessity for a theory, different theories, significance and comparison, applications.</p>	8	CO3
IV	<p><b>Torsion:</b> Torsional shear stress in solid, hollow and stepped circular shafts, angular deflection and power transmission capacity. Strain energy due to torsional loads,</p> <p><b>Stability of Equilibrium:</b> Instability and elastic stability, long and short columns, ideal strut, Euler's formula for crippling load for columns of different ends, concept of equivalent length, eccentric loading, Rankine formulae and other empirical relations.</p>	8	CO4

V	<p><b>Transverse Deflection of Beams:</b> Relation between deflection, bending moment, shear force and load, transverse deflection of beams and shaft under static loading, area moment method, direct integration method.</p> <p><b>Thin-walled Pressure Vessels:</b> Stresses in cylindrical and spherical vessels</p>	8	CO5

<b>Contents:</b>												
UNITS	Descriptions										Hrs.	CO's
I	Introduction of materials, Classification of materials, Engineering requirements of material, Solidification of metals, Crystallization, Crystal and amorphous, different types of bonds in different metals, Crystallography, Different mechanical properties of metals and other engineering materials like strength, hardness, elasticity, plasticity, Malleability, Ductility, Creep, Fatigue etc. Point and line defects in crystal, their relation to mechanical properties, Crystallographic directions and planes, deformation of metal by slip and twinning, Strengthening mechanism in metals, Hall-Petch effect.										8	CO1
II	Stability and metastability of metals, Cooling curves, Isomorphous, Utectic, Eutectoid , Eutectoid solid solution, Peritectic and other phase diagrams, Alloying , Characteristics of alloying elements, Iron-Carbon phase diagram, T-T-T diagrams, Types of Cast Iron. Types of Stainless Steels, Elastic, inelastic and Viscoelastic behaviour										8	CO2
III	Heat treatment of metals, Based on phase diagram and T-T-T-Diagram the heat treatment of various metals, Bulk heat treatments, surface heat treatments, Case carburizing, Types of Annealing, normalizing, Spherodising, Phase Transformations like Pearlite, Cementite, Austenite, Troostite, Bainite,Hard and soft Martensite etc. Laser hardening, Cyaniding, Boriding, Nitriding, Flame hardening, Ion implantation, etc. Heat treatment cycles										8	CO3
IV	Destructive and non-destructive testing methods, Tensile test, Compression test, shear test, bend test, Different types of Hardness tests, Impact tests, Fatigue tests, Hardenability test, Fracture analysis, NDT Methods. Different properties of Steels, Aluminum and it's alloys, Copper and it's alloys, Manganese and it's alloys, Chromium and it's alloys, Nickel and it's alloys.										8	CO4
V	Non-Metallic Materials- Polymers – types of polymer, commodity and engineering polymers -Properties and applications, Composites Materials, Solid solutions - Substitutional and interstitial. Ferrous and Non Ferrous Metals- Effect of alloying additions on steel (Mn, Si, Cr, Mo, V, Ti & W) - stainless and tool steels – HSLA steel.										8	CO5
